

SPECIFICATION

Please replace the paragraph beginning at page 7, line 25, with the following rewritten paragraph:

C | As best shown in FIG. 3a, the annular sealing member 52 that is contained within annular cavity generally completely fills the entire cavity 50 and has a cross-sectional shape generally conforming to the shape of the cavity 50, with small some material from the sealing member 52 being extruded into the clearance gaps 63 and 67. In the preferred form of the invention, the cross-sectional shape of the cavity 50, as well as the cross-sectional shape of the annular sealing member 52 contained within the cavity, is substantially consistent through the entire circumferential expanse of the cavity 50 and sealing member 52.
